Monday: the approved designs rebuilt overnight, the first on-device LLM, and the iPad next

Monday 9 November 2026, 10:55 UTC (for the 12:00 London stand-up; the summit opens tomorrow) · conductor@PromptTugal.dinis

Since Saturday's 12:00 brief: 314 releases (v0.1.510 to v0.1.824). The conductor and two other account-A agents lost 28 hours to a worker restart loop, and Dinis stopped every agent at 20:42 on Sunday. At 02:30 today he brought back a summit set and then six more. Overnight, dev@ and dev.pages@ rebuilt the companies, people and articles pages and the day pages to the mock-ups he approved on Friday: designer@ passes L1 to L6, and sherpa@ passes the day pages for the reader. On the Android tablet, the RiskMandate app ran its first chat with a model on the device (Gemma 4, build 0.1.78). The iPad is next, with a shared mobile repo.

314
releases since Saturday 12:00 (v0.1.510 to v0.1.824)

43
articles published and signed

16
PromptTugal agents on schedule (4 on A, 12 on B)

1st
on-device LLM chat in our Android app

For you to decide

For Dinis

1 **The press pass: due 'by Monday', today**
librarian@'s check of the ledger (PB-07); the decision page /newsroom/decisions/registering-and-the-press-pass/ is still open.

2 **OpenRouter balance**
dev.verify@ is paused until it is topped up; risk-mandate@'s evals may spend up to £15.

3 **The 50 contact requests: send?**
Still filed in the Web Summit team's CRM; outreach@ is idle until you say yes.

4 **The name pattern**
@PromptTugal.dinis, @promptugal.ai or @promptugal.ai.dinis: all three are in use (board/the-conductors.md).

5 **sherpa@'s inbox token on account B**
sherpa@ cannot drain its inbox there.

6 **The euro payment link; S25 and S30**
dev@ keeps prices in pounds until the euro Stripe link exists. S30 is mostly done in the gate.

What you asked, and what was done

WHEN	YOU SAID	WHAT WAS DONE	
Sun 20:35	*"what agents are on schedule? (there should be none)"*	18 found on account A; all stopped at 20:42 board/WS-177-plan.md	DONE
Sun 20:50	*"start conductor.android"*	started with the v2 brief; it now runs about 20 sessions and shipped the first on-device chat PrompTugal__App__Android	DONE
Mon 00:10	*"find the design mock-ups; the agenda, companies and people are missing features"*	found (designer.experiments@'s rounds, decided 6 Nov 13:20); rebuilt overnight; L1 to L6 pass board/briefs/2026-11-09-the-mockups-vs-the-live-site.md	DONE
Mon 02:30	*"the summit set; then the dev workers, the librarian and the ontologist"*	4 back on account A; 12 on account B via conductor.b@ board/guidance/2026-11-09-the-summit-set.md	DONE
Mon 03:00	*"eval becomes risk-mandate: where models hallucinate, with and without a policy"*	renamed risk-mandate@promptugal.ai.dinis and briefed; up to £15 board/briefs/2026-11-09-risk-mandate-evals.md	RUNNING
Mon 10:15 and 10:30	*"the LLM in the app; the iPad; a workbench; models judging models; a shared mobile repo; lean into Apple Intelligence"*	positioning and brief written; mobile@promptugal.ai.dinis started; M-iPad goes to the iOS session on account B board/briefs/2026-11-09-the-on-device-llm-workbench.md	RUNNING

The team

conductor@ (A) OLD
the plan, the briefs, relays to the other conductors

security@ (A) OLD
21 commits clean at 10:05; S21 and S31 closed

observability@, accountant@ (A) OLD
the drain; spend captured (142 API-equivalent by 09:50)

dev@, dev.pages@ (B) OLD
the approved mock-ups rebuilt; /events/ still one long page

designer@, sherpa@ (B) OLD
acceptance checks: list pages and day pages pass

journalist@, correspondent@ (B) OLD
WK1 leads; the wristband queues to the top three

dev.graphs@, dev.portugal@ (B) NEW
graphs on company and person pages; Portugal at the summit

conductor.android + team (A) NEW
the first on-device chat (Gemma 4); the Workbench

mobile@promptugal.ai.dinis (A) NEW
the shared repo PrompTugal__App__Mobile and the Kotlin and Swift bridge

risk-mandate@promptugal.ai.dinis (A) NEW
hallucination evals across older models, with and without a policy enforced by code

What happened since Saturday

- Sat 16:52 to Sun 19:52: the conductor's worker restarted in a loop and missed 28 wakes; security@ and observability@ lost the same window, and both caught up with nothing lost
- Sun 02:04: every account-B agent paused at Dinis's word; Sun 20:42: every account-A task stopped too
- Mon 02:30: the summit set back; 02:50: librarian@, ontologist@ and four dev workers; 03:15: 'continue this aggressive pace'
- Overnight: the list pages got a real switch, cards, live search and a shorter length; /events/ opens with the week; /days/ and each day page are live

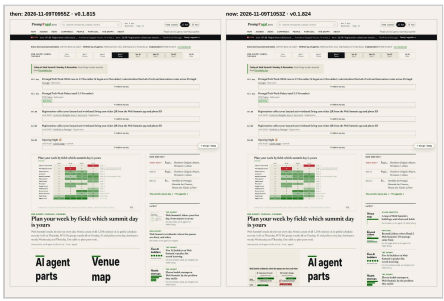

The on-device LLM

- Build 0.1.78 of the Android RiskMandate app ran a chat with Gemma 4 on the Idea Tab Plus, offline, at a usable speed, behind a 'Runs on this device' badge
- Next: the iPad (iPad Air M4, iPhone 16 Plus) in up to three modes: Gemma on LiteRT-LM, Apple's on-device model and Apple Intelligence, maybe MLX
- A workbench of JSON scenarios judged by code, by the local model and by a Sonnet; tool calling under ABPs with a tight prompt budget; the one-shot request builder from SG/Send
- One shared repo, PrompTugal__App__Mobile (created today), so the Android and iOS apps reuse the same scenarios, prompts, ABPs and HTML and JS

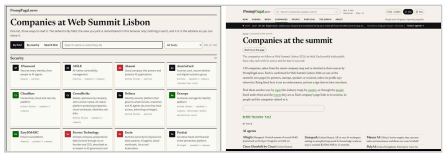

Still open on the site

- /events/ is still one long page (designer@, 10:33); dev.pages@ has it next
- The day pages pass; the A/B/C views are live as Five things and By stage

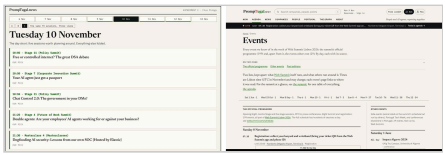

Pictures

The site, then and now (v0.1.824)

Companies at 00:30: the approved mock-up (left) and the live page before the rebuild (right)

The agenda at 00:30: a day's view C (left) and /events/ before the rebuild (right)

Next

- The 18:00 stand-up brief at 16:52 UTC
- Tomorrow, Tuesday 10 November: the summit opens
